

# DUPONT™ TYCHEM® 10000 GARMENT ENHANCEMENTS

DuPont has made a number of significant design improvements to Tychem® 10000 suits based on recent customer feedback.

Larger armholes make it easier for wearers to remove hands from gloves and sleeves and check gauges and systems

Redesigned exhaust valve covers eliminate snaps and multilayer closure requirements

Exhaust valves relocated to accommodate visor and zipper redesign and SCBA apparatus

All suits now feature Pirelli® valves with no shelf-life limits

Straighter zipper path reduces likelihood of pinching

Zipper closes downward for easy inspection by donning partner

Permanently sealed zipper covering replaces original horizontal flap

Longer boot-covering flap accommodates taller boots and doubles as knee reinforcement

Fabric now falls to the bottom of the boot, eliminating need for elastic and reducing risk of needle punctures

Shorter flap fits boots better

Size XS has been added, expanding the size offerings from XS to 6X

Easy-fitting one-piece tube-like sock replaces the "heeled sock" design of the original suit
