

Tychem® 10000 garment enhancements

DuPont has made a number of significant design improvements to DuPont™ Tychem® 10000 suits based on recent customer feedback.

Reshaped hood for improved overall field of vision and downward visibility

Larger armholes make it easier for wearers to remove hands from gloves and sleeves to check gauges and systems

Adhesive added to inner glove fingertips to prevent glove inversion

Longer boot-covering flap accommodates taller boots and doubles as knee reinforcement

Fabric now falls to the bottom of the boot, eliminating need for elastic and reducing risk of needle punctures

Size XS has been added, expanding the size offerings from XS to 6X

Anti-fog solution technology helps keep visor clear

Highly flexible zipper with T-bar handle for easier donning and doffing

Straighter zipper path reduces likelihood of kinking

Zipper closes downward for easy inspection by donning partner

Permanently sealed zipper covering replaces original horizontal flap

Redesigned exhaust valve covers eliminate snaps and multilayer closure requirements
Exhaust valves relocated to accommodate visor and zipper redesign and SCBA apparatus

All suits now feature Pirelli valves with no shelf-life limits

Easy-fitting, one-piece, tube-like sock replaces the "heeled sock" design of the original suit
